

Read before unzipping

1. Right-click on the archive.
2. Click **Properties**.
3. In the **Security** section of the **General** tab, check **Unblock**.
If you don't see the **Unblock** option, your PC doesn't block the files, and you can skip this step.

Please be aware that Windows might see scripts downloaded from external sources as possible threats. You have to unblock the files to mark them safe and avoid further warnings and errors.

4. Click **Apply** and then **OK**.

5. Extract the files in any location except the one you want reorganized to avoid conflicts.
6. Open the folder **FileOrganizer** and follow the steps from the instruction file to run the script.
